

Lochan Vishwanath

lochan.vish@hotmail.com — +91 8310336397 — linkedin.com/in/lochanv

Technical Skills

- **Frontend:** JavaScript, TypeScript, React, Next.js, Redux, Zustand, React Query, Vite, Webpack, Tailwind CSS, D3.js, Storybook
- **Backend:** Node.js, Express.js, Go/Golang, REST APIs, gRPC integrations, MongoDB
- **AI Engineering:** LLM integration, CopilotKit, tool-calling agents, AI workflow automation, prompt engineering, RAG concepts
- **Cloud & DevOps:** Microsoft Azure, Azure AD, Blob Storage, CDN, SSO, AWS, GitHub Actions, CI/CD
- **Testing & Tooling:** Playwright, Jest, Vitest, unit test coverage gates, monorepo tooling, Jira, Git, Agile/Scrum

Work Experience

Senior Frontend Engineer — CloudBees

February 2025 – April 2026

- **AI Assistant / Unify AI:** Enhanced an in-product AI assistant built with **CopilotKit** and LLM tool-calling, enabling users to establish connections, start runs, and update workflow YAML through natural-language commands.
- Added new tool-action flows to the AI assistant by wiring frontend chat interactions to platform APIs, reducing multi-step workflow execution time by an estimated **30%** for supported actions.
- **Frontend Quality / Unit Testing:** Implemented file-level unit test coverage enforcement across the frontend monorepo, replacing module-level coverage checks and ensuring newly changed files met coverage expectations independently.
- Improved unit test accountability across the monorepo by preventing untested files from being hidden inside module-level coverage averages, increasing coverage compliance for changed frontend files to over **90%**.
- **CI/CD Optimization:** Built a hash-based test caching mechanism for pre-push hooks and CI pipelines, running unit tests only for changed modules and reducing frontend test execution time by approximately **45%**.
- Wrote and maintained **Playwright** end-to-end scripts for critical SaaS flows during a phase without a dedicated QA team, improving regression coverage for admin dashboard and platform workflows.
- **Integrations / Connection Health:** Contributed to a full-stack feature for surfacing connection health across Jira, GitHub, GitLab, Bitbucket, Jenkins, CloudBees CI, and other third-party integrations.
- Helped design a unified connection-status model for provider-specific states such as established, refreshing, stale, broken, and error, reducing ambiguity in integration health reporting from the main table view.
- Optimized the connection-health fetching strategy by prioritizing recently active connections and avoiding unnecessary provider API calls, targeting a reduction of nearly **60%** in redundant status-check requests.
- Collaborated on Go, Node.js, REST API, and gRPC-to-HTTP integration layers to expose backend platform capabilities to the React and TypeScript SaaS frontend.

Software Engineer 2 — HashedIn by Deloitte

February 2020 – February 2025

Promotions: Software Engineer Intern → Software Engineer 1 → Software Engineer 2

- **AI-Powered Jira Ticket Generator:** Built a web application that used LLMs to convert user stories into structured Jira tickets, reducing manual ticket creation effort by **40%**.
- **Kroger E-Commerce Platform:** Built check-cashing and credit-card checkout flows; integrated IoT devices including card readers, MICR readers, and weighing scales through a Pub/Sub-based architecture, improving transaction speed by **25%**.
- **Demand Better Analytics Platform:** Built interactive D3.js visualizations in Next.js and optimized real-time data fetching with React Query, reducing dashboard load time by **20%**.
- Improved analytics UX by adding responsive chart interactions, filters, and drill-down flows, increasing user engagement with reporting dashboards by **30%**.
- **Azure Migration:** Contributed to migration from AWS to Azure by integrating Azure AD, Blob Storage, CDN, and SSO; improved deployment reliability and reduced downtime by **20%**.
- Resolved **95%** of critical frontend and integration bugs within 48 hours and improved project delivery timelines by **15%** through cross-functional collaboration with product, design, backend, and QA teams.

Education

Bachelor of Engineering, Information Science

Sai Vidya Institute of Technology, Karnataka

2016 – 2020
